

FORECASTING WITH ORPHEON

See what's coming, before it happens.

NexPatch turns your operational data into **reliable forecasts** for demand, risk and capacity. Your team decides ahead of time instead of reacting.

UNCERTAINTY, NOT A POINT GUESS

1 System

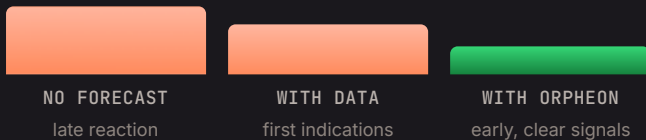

PIPELINE TO FORECAST (ORPHEON)

100 %

TRACEABLE RESULTS

Plan instead of react

Too little material, too much stock, missed demand: the later you see a problem, the more expensive it gets.

What NexPatch makes possible

- Our own proven PatchTST time-series models
- Demand, inventory, churn, capacity, finance, anomalies
- Directly on your data, understandable and traceable
- From pipeline to forecast in one system: Orpheon

01

Capture

connect operational data from your systems

02

Model

detect patterns, seasonality and drivers

03

Forecast

robust forecasts with confidence ranges

04

Act

turn early signals into decisions

05

Monitor

track quality and keep models up to date

A fit for you if

Operations, finance, supply chain or planning: you want to see demand and risk earlier.

What you gain

Better planning, optimised inventory and decisions based on signals instead of gut feeling.

Explainable, not a black box

Every forecast shows data, assumptions and uncertainty. That is how teams build trust.

● OUR OWN PATCHTST MODELS

● EXPLAINABLE FORECASTS

● PART OF THE ORPHEON PLATFORM

● GDPR COMPLIANT

Let's find out what your data can predict.

30 minutes, no strings attached: we review one forecasting use case and show which signals are hidden in your data.
